

Peter Askulv

Founder and designer
at Klättermusen

Design today for recycling tomorrow

- We design long lasting products today. They will be recycled in 5-10 years from now.
- To recycle today we must use pure Polyester or Polyamide. No PU coatings and No PU stretchfibers.
- How is the situation 2020?

Recycling based on cooperation

We need 50 metric tons to start recycling of Polyamide.

To achieve that, we need to cooperate within the industry and on a national level.

To keep the quality we need a label with a specified criteria matched to the recycling process ex.

Or we need to be able to remove coatings and separate fibres. Thats the real dream.

Polyamide
Certified for recycling

RECOVER

Return, Recycle, and Reuse

- Bring products back to the shop and get money back.
- A label on the product states the value of the deposit; 1, 5, 10 or 20 Euros.
- We like to actively contribute to a better environment and rECOver is part of this.

Lets work together to create a true material circulation

- We do not compete with environmental knowledge. Ask and we will help if we can.
- Designers can join our network for Eco knowledge by sending us an email.
