

Baleen Filters Pty Limited

Baleen Filters
The Future in Micro-Screening

waterAUSTRALIA

Our Technology

- The Baleen Filter is a distinctly unique selective separation technology that enables recovery of suspended matter from process water streams;
 - Separates visible and/or sub-visible constituents inline
 - Enhances pre-treatment and/or clarification processes
 - Applies to both Industrial and Municipal applications
 - Alleviates settling, flotation and/or biological requirements
 - Founded by the University of South Australia in 1999
 - Internationally Acclaimed as a “Highly Disruptive Technology”
 - Used extensively within the Food, Mining & Municipal sectors
 - Some 150 Pioneering Installations currently span the globe
 - Pilot installations already underway in North America

Baleen Filters
The Future in Micro-Screening

waterAUSTRALIA

Customer Benefits

- Raw material and/or By-product recovery inline
- Enhanced effluent reduction and/or stream polishing
- Sludge thickening and/or Biomass classification
- Membrane barrier-protection & Backwash dewatering
- In-process water recycling
- Ex-process water re-use opportunities
- Relatively low capital & operating costs of installation
- Capital payback generally measured in months
- International Customer Support Networks exist
